

## **Press release**

---

### **Republic of Belarus to improve road safety and traffic flow.**

- > **Contract awarded to Austria's Kapsch TrafficCom**
- > **New Traffic and Road Safety Coordination Center**

**Minsk/Vienna. July 23, 2020** – Republican Unitary Enterprise Minskavtodor-Center (RUE Minskavtodor-Center) has selected a joint venture of Kapsch TrafficCom Transportation S.A.U. and Kapsch TrafficCom AG to design, implement and maintain the new Traffic and Road Safety Coordination Center (TRSCC) and to deliver various Intelligent Transportation System (ITS) components in an international public tender held within a Transit Corridor Modernization Project and financed by the World Bank credit funds.

The creation of the Traffic and Road Safety Coordination Center is a major step forward to a purposeful and structured deployment of ITS technologies in the road sector of Belarus. Within the awarded contract Kapsch will provide an intelligent mobility system and will be responsible for all project stages, from the detailed design to the training of staff and maintenance of the TRSCC. Besides, Kapsch will implement additional ITS equipment (cameras, traffic detectors, etc.) in several road sections.

“We are really proud of being chosen by Belarus side as a partner to make another important nationwide project happen,” says Michael Gschnitzer, VP Strategic Sales, Kapsch TrafficCom. “The new TRSCC will improve the safety, traffic flow and road users satisfaction. This project is a further success story and underlines the commitment of Kapsch in Belarus, where we have already proven to be a reliable partner with the implementation and operation of the Nationwide Electronic Toll Collection System (ETC-System ‘BelToll’).”

#### **Real-time traffic data to improve road safety.**

The creation of this new innovative system provides a broad set of functionalities for the management of interurban traffic and road infrastructure. The system automates the collection and visualization of real-time traffic data, allowing operators to detect and respond to dangerous road conditions, congestion, incidents, and emergency situations. The information can then be quickly disseminated to drivers, road maintenance teams and interested stakeholders. The system also enables the easy integration and operation of current and future ITS equipment into the TRSCC and provides the interoperability of traffic control systems.

**Kapsch TrafficCom** is a globally renowned provider of transportation solutions for sustainable mobility. Our innovative solutions in the application fields of Tolling, Traffic Management, Demand Management and Mobility Services contribute to a healthy world without traffic congestion.

We have brought projects to fruition in more than 50 countries around the globe. With our one-stop solutions, we cover the entire value chain of our customers, from components to design and implementation to operation of systems.

As part of the Kapsch Group and headquartered in Vienna, Kapsch TrafficCom has subsidiaries and branches in more than 30 countries. It has been listed in the Prime Market segment of the Vienna Stock Exchange since 2007 (ticker symbol: KTCG). Kapsch TrafficCom's about 5,100 employees generated revenues of EUR 731.2 million in financial year 2019/20.
