Press Factsheet

Kapsch TrafficCom

Global specialist in intelligent solutions for traffic and transport management.

Kapsch TrafficCom is a globally renowned provider of transportation solutions for sustainable mobility. Our innovative solutions in the application fields of Tolling, Traffic Management, Demand Management and Mobility Services contribute to a healthy world without traffic congestion.

We have brought projects to fruition in more than 50 countries around the globe. With our one-stop solutions, we cover the entire value chain of our customers, from components to design and implementation to operation of systems.

Kapsch is growing its core business to develop complete mobility solutions for the benefit of all traffic participants. This is through the development of new, integrated multi-application solutions, with an increased focus on end customers and an expansion of solutions and services from the highway to the city. The company's international market position is continuously expanded through further projects in the field of ETC (Electronic Toll Collection) and by developing further promising segments in the Intelligent Transportation Systems (ITS) business.

As part of the Kapsch Group and headquartered in Vienna, Kapsch TrafficCom has subsidiaries and branches in more than 30 countries. It has been listed in the Prime Market segment of the Vienna Stock Exchange since 2007 (ticker symbol: KTCG). Kapsch TrafficCom's about 5,100 employees generated revenues of EUR 731.2 million in financial year 2019/20.

Solution portfolio.

Kapsch TrafficCom offers a comprehensive portfolio of products, systems and services for efficient intelligent transportation systems:

- **Electronic Toll Collection (ETC):** With first activities in the mid-90s, Kapsch TrafficCom is a pioneer in ETC solutions. The company’s solutions are able to integrate a wide variety of fee models aimed at reducing congestion. The back office calculates the toll depending on the distance travelled, time of day, vehicle class, number of passengers, the traffic situation, or any combination of these parameters. Kapsch TrafficCom acts as a one-stop shop providing everything from components (e.g. on-board units), the design and build of turnkey end-to-end toll collection systems to the operation of such systems.

- **Traffic management:** The three most important areas of application for traffic management solutions are cities and metropolitan areas, highways, and bridges and tunnels. The urban traffic management portfolio covers the entire spectrum from a single intersection up to the whole metropolitan area where multiple modes of transportation and agencies operate. The highway traffic management system collects real-time data and delivers it to the traffic management control centers, allowing operators to detect and respond to congestion, incidents, emergency situations, and other conditions. Information such as travel times, accidents, roadway and weather conditions can be quickly disseminated to the public, allowing motorists to make informed travel decisions. The solutions for bridges and tunnels, who constitute the most vulnerable points of any roadway system, can be used to manage both the flow of traffic and critical infrastructure elements. This enables problematic situations to be identified before they can turn into a safety hazard for road, tunnel, and bridge users.
> **Connected Mobility**: A pioneer in the V2X market, Kapsch TrafficCom has extensive domain know-how in this field. Hence, the company can offer customers complete end-to-end solutions, as well as the consulting services necessary for a successful project. Kapsch TrafficCom sees itself as a provider of the complete V2X communication technology solution for smart roads. On the one hand the company develops and produces hardware components both for road-side infrastructure (so-called roadside units, RSUs) and for the outfitting of existing vehicles (specific after-market on-board units, OBUs). The associated software stack (communication software) allows products to be customized for specific applications and markets. Furthermore, Kapsch offers a central system for gathering vehicle data, monitoring roadside units and sending messages. All of Kapsch TrafficCom’s V2X solution components can be integrated into the company’s traffic management systems.
