

Kapsch TrafficCom AB

Embedded Software Development Engineer

Location: Jönköping

Kapsch TrafficCom, a company of the Kapsch Group, is a provider of intelligent transportation systems in the fields of tolling, traffic management, smart urban mobility, traffic safety/security and connected vehicles. As a one-stop solutions provider, Kapsch offers end-to-end solutions covering the entire value creation chain of its customers – from components and design to the implementation and operation of systems.

Kapsch TrafficCom AB in Jönköping has 170 employees and is specialized in Connected Vehicles (V2X) and Electronic Tolling systems.

Job-Facts

You will be working in a global development team that includes both designers and testers within the areas of HW, SW and Mechanics. The designers and testers are working very close together to achieve an efficient development approach. Polarion is used as ALM tool for the complete development team to track all requirements and test cases. In a project you will have the possibility to be part of the complete development lifecycle, from concept to production. The software development will both involve requirements analysis, software design, unit test and continuous integration. The market we are addressing is Tolling, Connected Vehicles and V2X technology, which is a new business segment within Kapsch. So here you will have the chance to be part of building up a new department within Kapsch but also be part of building vehicles of the future.

Working areas

- > Requirement Analysis
- > SW design
- > Design documentation
- > Continuous integration

Work assignments

- > Design and develop embedded software for our devices, which contain GNSS and DSRC technology for intelligent mobility and satellite-based traffic solutions
